Note: Refrigerant leakage contributes to climate change. Refrigerants with a lower global warming potential contribute less to global warming in the event of a leakage than those with a higher global warming potential. This appliance contains a refrigerant with a global warming potential of 0.02. Therefore, the leakage of 1 kg of this refrigerant would have 0.02 times the impact on global warming compared to 1 kg of CO₂, over a period of one hundred years. Do not carry out any work on the refrigerant circuit or dismantle the appliance. Always consult qualified personnel.
